This would be similar to a shell script which doesn't change any files, only creates/commits them. I can't find an option in these tools that would make them behave this way. I guess they are designed to be used from a Windows command prompt, which I don't want. In the GUI these two options (or aliases) are defined for "Create": "nocolor" and "color=never". Am I missing any other option? A: The reason for your question is hidden in the little details. Windows' " " is different than Unix's ". In Git, it's impossible to have a read only repository and treat it as either read only or not read only. You can't have a repository that doesn't change anything, because then there is nothing to commit. The closest you will get is to set a local configuration that make all reads as read only in your local configuration (i.e. when you use a Unix shell and not Windows' one). In Windows, the right tool is TortoiseGit, which will let you select read only or read write repository, but this will change the behaviour of the 'git commit' command. For example, to change the 'git commit' command use TortoiseGit (e.g. the "Settings" menu
